

## Assignment 8

### Chapter 6

Solve the systems algebraically using the elimination method. These will require you to multiply both of the equations first before adding.

1.

$$\begin{aligned}4x - 2y &= 10 \\ 3x + 5y &= 14\end{aligned}$$

2.

$$\begin{aligned}4x + 3y &= 4 \\ 3x + 2y &= 2\end{aligned}$$

3.

$$\begin{aligned}2x - 3y &= 3 \\ 3x - 5y &= 4\end{aligned}$$

### Chapter 6

These are a mix of systems solve by using one of the techniques: elimination or substitution.

1.

$$\begin{aligned}x + 3y &= 11 \\ 3x + 2y &= 5\end{aligned}$$

2.

$$\begin{aligned}2x + y &= 4 \\ 3x + y &= 9\end{aligned}$$

3.

$$\begin{aligned}y &= 3x + 1 \\ 2x + 5y &= 22\end{aligned}$$

Name: \_\_\_\_\_

4.

$$\begin{aligned}4x - 2y &= 16 \\ x + 2y &= 9\end{aligned}$$

5.

$$\begin{aligned}x &= 3y \\ x + 2y &= 10\end{aligned}$$

6.

$$\begin{aligned}x + 3y &= 7 \\ 3x - y &= 1\end{aligned}$$

7.

$$\begin{aligned}2x + 3y &= 1 \\ 3x + 2y &= -1\end{aligned}$$

## Chapter 6

Find the solution of each system by graphing.

1.  
 $y = 3$   
 $x + y = 5$

2.  
 $y = -2$   
 $x = 3$

3.  
 $y = 2x$   
 $2x + y = 8$

4.  
 $y = -\frac{1}{2}x$   
 $x = -4$

## Chapter 5

Solve these equations for  $y$ .  
Your answer should be in  $y = mx + b$  form.

1.  $x + 2y = -6$

2.  $4x - 3y = 15$

3.  $x + 3y = 12$

4.  $-x - 4y = 12$

5.  $-8x + 2y = 10$

## Chapter 5

Graph these equations.

1.  
 $y = 2x - 3$

2.  
 $y = -3x + 4$

3.  
 $y = x + 2$

4.  
 $y = -\frac{1}{2}x - 1$
